please note

Stones in photos have been professionally shaped and field-trimmed. Finished applications are at the discretion of the property owner and installing contractor. Each piece of natural stone varies in color, veining and pattern.

Photos used in brochures and websites are to create a general idea of the material. We produce our stone veneer product from natural stone and it is provided to you "as is". We encourage you to visit one of our dealer locations to view displays, request samples, and work with sales professionals able to realize your vision.

Please blend all material before installation when multiple pallets are being used. For best results, washing stone before interior installation is recommended. The quantities of our packaging will take into account a standard installation including a mortar joint. Installation using a dry stack method or trimming of stone will require additional material.

Stones in photos have been field-trimmed. Depending on preference, more or less trimming may be required to achieve desired look.
